*April 13-18, 2011*

Pechter Middle East Polls

# SURVEY METHODOLOGY

# **SURVEY METHODOLOGY**

- **Interviews were conducted April 13-18, 2011.**
- **Data collection was performed by trained employees of the International Republican Institute (IRI). The sample frame was based on the latest population estimates by the Iraq Central Organization for Statistics and Information Technology and a 2007-2008 United Nations World Food Program survey. Consultative guidance on fieldwork and analysis was provided by Pechter Middle East Polls of Princeton, New Jersey.**
- **Throughout this survey, the Northern Triangle refers to the provinces of Anbar, Diyala, Kirkuk, Ninawa and Salahhadin. Northern Triangle data from previous IRI polling reflects the weighted sample of these five provinces.**
- **The target population is Iraqi adults age 18 years and above in the Iraqi Northern Triangle region. A stratified multi-stage sample procedure was used for interviewing. Population within provinces was broken down by districts and geography (urban/rural). Quotas were set by district and by geography within each district.**
- **Sample starting points were chosen within districts based by either going to the center of the mahala or to the largest mosque and dropping a pen or pencil on the ground and spinning it. The direction in which the pen/pencil pointed was the direction that the interviewing started. Every fourth dwelling on the left side of the nearest street was sampled until the quota was met. The Kish table method was used for actual respondent selection within each household.**

# **SURVEY METHODOLOGY**

- **A total of 765 interviews were completed, with a response rate of 73 percent in the region. The margin of error is plus or minus 3.5 percent overall. Quotas were set by province to allow for provincial analysis and all 765 interviews have been weighted proportionally by province and gender.**
- **After the data was collected, provincial results were weighted in proportion to population within the region. For example, Anbar represents 16.5 percent of the registered voters in the Northern Triangle region; therefore the 123 interviews collected from Anbar were weighted to 16.5 percent of all interviews. Similar weighting was applied to each province to ensure that data are consistent with actual registered voter estimates and previous surveys.**
- **Gender in the survey was 48 percent male and 52 percent female. Gender was weighted to reflect the estimated numbers in the Iraqi Northern Triangle region: 51 percent male and 49 percent female.**
- **Verification was performed on 10 percent of the sample, either by actual observation or through follow-up interviews.**
- **Figures in charts and tables may not sum to 100 percent due to rounding; in all cases where don't know / refuse to answer rates are more than 10 percent, the information is displayed.**
- **When results are broken down by province, gender or religion, the percentage of the total sample is displayed.**
- **The information in this report has been compiled in accordance with international standards for market and social research methodologies.**
