Sierra Leone Public Opinion Survey

December 16 – December 30, 2018

CENTER FOR INSIGHTS IN SURVEY RESEARCH

A PROJECT FROM THE INTERNATIONAL REPUBLICAN INSTITUTE

Detailed Methodology

- This survey was conducted by Pan African Field Services on behalf of the Center for Insights in Survey Research.

- Data was collected throughout Sierra Leone between December 16 and 30, 2018 through CAPI administered face-to-face interviews in respondents' homes.

- The sample consisted of n=1,519 adults in Sierra Leone, aged 18 and older.

- A multi-stage probability sampling method was used. The sample was stratified by region and by urban/rural residency, followed by random selection of primary sampling units (PSUs) within each stratum. Households were selected by random walk in each of the 191 PSUs, and respondents were selected by Kish grid. The sampling frame was based on the 2015 Population and Housing Census of the Statistical Office of Sierra Leone.

- The achieved sample was weighted for gender, age groups, and formal versus no formal education.

- The response rate was 78 percent.

- The margin of error for the full sample does not exceed ± 1.95 percent.

- Charts and graphs may not add up to 100 percent due to rounding.

- The survey was funded by the United States Agency for International Development.
